ALL MEASUREMENTS ARE PER GALLON

The Master Feeding Schedule begins with adding 2 to 3 inches of coco fiber as a mulch to prevent soil compaction and allow soil to dry out evenly. We recommend using Oregonism XL and Big Worm as a top dress. Apply liquid nutrients at 5 ml per gallon of product with each feeding. Apply dry nutrients and worm castings on top of the coco mulch periodically, in amounts based on container size, according to the table below. Once your plants start to grow rapidly, feed with liquid nutrients at every stage up until the final week of flush. When introducing a new fertilizer to your program, start slow and increase levels gradually to ensure compatibility and avoid fertilizer excess. If you don't notice benefits in your harvest from any product you are using, whether ours or another company's, then don't use it.
